

CUDA Command

[Zhila Nouri](#)

Some students get incorrect results on histogram because of not using the cudaMemset command. When you allocate a memory on GPU global memory, it's recommended to set the memory to zero. The format of the command is as follows:

```
cudaMemset (void * pointer_variable, int value, size_t size_of_pointer_variable);
```

in which the parameters should be replaced by desired values (for histogram replace the value with 0).
